DETAILED ACTION

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3-5, 7-14 and 16-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Peterson et al. (6,154,378).

Peterson et al. disclose a polyphase inverter with neutral-leg inductor in Figs. 3a and 3b. A common mode choke (20) connected between alternating current output terminals of the power converter (16) and input terminals of the alternating current circuit (30) and connecting means (32) that connects an outgoing line from a neutral point (312) of the alternating current circuit to a reference potential point having little potential variation at a power source system side of the power converter, resistors (50c) and capacitors (30f).

4. Claims 1, 3-5, 7-14 and 16-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Julian et al. (5,852,558).

Julian et al. disclose a method and apparatus for reducing common mode voltage in multi-phase power converters in Fig. 1. A common mode choke (74, 75, 76, 77) connected between alternating current output terminals of the power converter (20)

and input terminals of the alternating current circuit (22) and connecting means (36) that connects an outgoing line from a neutral point (between 42 and 44) of the alternating current circuit to a reference potential point having little potential variation at a power source system side of the power converter, resistors (26) and capacitors (38).

5. Claims 1, 3-5, 7-14 and 16-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Enjeti et al. (6, 122,184).

Enjeti et al. disclose a method and system for an improved converter output filter for an induction drive system in Fig. 3. A common mode choke (42) connected between alternating current output terminals of the power converter (30) and input terminals of the alternating current circuit (18) and connecting means (between 35 and 46) that connects an outgoing line from a neutral point (35) of the alternating current circuit to a reference potential point having little potential variation at a power source system side of the power converter, resistors (44) and capacitors (46).

Response to Arguments

6. Applicant's arguments with respect to claims 1, 3-5, 7-14 and 16-22 have been considered but are moot in view of the new ground(s) of rejection.
